

CoreOptions

Roseburg provides a broad selection of core options including: UltraBlend particleboard, Synergite and other MDFs. For green projects we meet your needs with our hybrid SkyBlend™ particleboard and MDF cores. All of our green cores have no urea formaldehyde added in the manufacturing process. Our engineered core options give you the dimensional stability and surface quality you can rely on every day.

UltraBlend particleboard

is a multi-layered substrate, produced using a blend of softwoods. The combination of sanding to extremely smooth, tight and grainless surfaces on both sides, with a controlled distribution pattern of particles in the core, results in a perfect, dimensionally stable panel.

Roseburg Synergite

Medium Density Fiberboard (MDF) and other MDFs make for a very smooth, consistent panel. This is a great substrate for applications when routing and shaping are required.
